Ready to tackle cloud migration and modernization? It’s easier done than said.

According to Gartner, almost half of an enterprise’s products and services are now digital or digitally delivered. As this number grows, so too will the reliance on cloud compute, storage, and networking infrastructure. Yet for many, migrating and modernizing workloads can feel hard. That’s why we created RAMP.

Many moving parts go into migration and modernization projects. This complexity can lead to lengthy delays and budget blow-outs. Many enterprises plan to move more workloads to cloud in 2022. Enterprises embark on infrastructure modernization for a range of reasons. Agility is the top driver, followed by reliability and cost.

Customers are already RAMPing up. Major League Baseball migrated a complex Wheelhouse environment to BigQuery. AppLovin migrated seven data centers—five of them in a single day—to Google Cloud, with zero disruption. Carrefour reduced operating costs and boosted sales by moving to Google Cloud VMware Engine.

With a combination of tools, funding, specialized resources and qualified partners, RAMP is built, and to end migration program accelerate your path to success. With a combination of tools, funding, specialized resources and qualified partners, RAMP is built, and to end migration program accelerate your path to success.

RAMP gets you to the finish line, faster. Use best-in-class tools to map out your IT landscape and workloads. Connect with Google partners who specialize in your type of workload or migration. Migrate faster with help from engineers, migration specialists, and more. Access funding to pay for your migration journey. RAMP’s proven pathway delivers great results.

RAMP’s proven pathway delivers great results.
